Auditor's Comments:

Total number of iVotronic ballots cast containing no votes: 13
 The following precincts have no ballots cast in them: Emergency, Fail safe
 This audit is complete and has no exceptions.

EL30A iVo to EL155 to EL152 Cross Check and Cancelled Ballots.

Horry Ballot Audit Report

EL30A Ivo Ballots	EL155 Ballots	EL152 Ballots
2565	2565	2565
Delta from EL30A	0	0
	Delta from EL155	0
	Cast By Voter	2565
	Cast By Poll Wkr	0
	Blank Cast by PW	0
	Cancelled Ballots	50
	Wrong Ballot	0
	Voter Left AB	0
	Voter Left BB	1
	Voter Request	10
	Printer Problem	3
	Terminal Problem	6
	Other Reason	30

(AB = After ballot selected by poll worker.)
 (BB = Before ballot selected by poll worker.)

Number of audio (ADA) events in this election: 0

Note: The following machines(s) have audit records but no ballots were cast on them: 5132082
 Because they do not have ballots cast, they cannot be matched to a precinct. This is not an issue as long as the EL30A Ivo Ballots, the EL155 Ballots and the EL152 Ballots match in the table immediately above.

How to read this report.

This is the ballot level report. It compares the number of ballots cast in the tabulation report, the EL30A with the number of ballots cast in the audit data.

The values read from the EL30A report are reported in four categories; Total, Optical (Opt), iVotronic (iVo) and Flash. None of these values on each line are calculated but parsed from the actual report. The total lines are the calculated sums of the individual precinct line values.

The Opt totals are the total number of ballots cast on paper ballots that were scanned into the optical scanner and transferred to the tabulation computer via memory stick or ZipDisk (depending on the type of device, M100 or M650 used to scan the ballots.) Optical totals should exist only in some but not all of the Virtual Precincts at the bottom of the table.

Horry Ballot Audit Report

The iVo totals are the results gathered from the PEBs (Personal Electronic Ballot) which are used to open and close an iVotronic voting machine and, after the polls have closed, gather the ballots cast for transmission to the tabulation system.

The Flash totals are the totals that are read from the flash cards in the rare event that the ballots cannot be copied from the machine to the PEB or from the PEB to the tabulating machine.

The values on the Audit side come from the iVotronic audit data that is read from the flash cards as part of the audit process. That process combines the individual machine data into two master audit files, the EL155 Vote image log and the EL152 iVotronic event log.

The EL155 contains a record of all the votes cast on a ballot. The vote images indicate the machine. Counting the number of asterisks in a precinct we get the number of ballots cast in that precinct. That number should always match the number in the iVo column on the EL30A side of the report.

Optical ballots do not have electronically readable audit files. So if the audit data iVotronic total does not match the EL30A Total value, the auditor is prompted to read the paper report from the optical scanner and enter the total ballots cast into the auditing program.

If the sum of the audit iVotronic and Optical ballots cast still do not match the EL30A total value, then the audit software reads the EL68 Manual Entry log for any changes made in that precinct to either the iVo or Opt totals by the CEC staff. It displays any manual entries to the auditor for inclusion into the totals. If accepted by the auditor these entries are automatically added to the Man column from the Manual Entry log.

Finally, the audit software calculates the Delta value which should be zero unless the sum of the iVo, the Opt and the Man do not match the EL30A Total column. If the Delta is greater than zero then audit data is missing. A comment will be placed on that line in the report indicating missing audit data. If the Delta value is less than zero then there are more ballots in the audit data than there are in the tabulated data and a comment will be placed on that line in the report.

Wherever possible, the audit system will attempt to indicate where the difference is by displaying the iVotronic machine numbers and the number of ballots cast on that machine that exist in the audit data. In the case of missing tabulated data, it might be possible to identify a machine that has the same number of ballots cast as the delta value and that number and ballot count will be highlighted with a < sign. If there is a non zero Delta value there will be an entry by the auditor explaining the variance.

Finally, there is a EL30A iVo to EL155 to EL152 Cross Check and Cancelled Ballots table in the report. This table should indicate that the number of ballots cast in the EL30A match the numbers in the EL155 and the EL152 report. Then there are some statistics pulled from the EL152 report that indicate how many ballots were cast by the voter and the number cast by the poll worker. Lastly the number of ballots that were cancelled and the reason they were cancelled. It should be noted that the reason cancelled is chosen from a pull down menu presented to the poll worker when a ballot is cancelled, there is no way to validate the poll worker's choice.

How to read this report.

This is the vote level report. It compares the number of votes cast for each candidate in the tabulation report with the number of ballots cast in the audit data for each candidates in each precinct.

The tabulated values as read from the EL30A report are reported in four categories; Total, Optical (Opt), iVotronic (iVo) and Flash. None of these values on each line are calculated but parsed from the actual report. In the EL30A report all Write-in votes are added together and reported as one candidate name - Write-in. The EL30A does not report individual Write-in candidates.

The Opt totals are the total number of votes cast on paper ballots that were scanned into the optical scanner and transferred to the tabulation computer via memory stick or ZipDisk (depending on the type of device, M100 or M650 used to scan the ballots.) Optical totals should exist only in some but not all of the Virtual Precincts at the bottom of the table.

The iVo totals are the results gathered from the PEBs (Personal Electronic Ballot) which are used to open and close an iVotronic voting machine and, after the polls have closed, gather the ballots cast for transmission to the tabulation system.

The Flash totals are the totals that are read from the flash cards in the rare event that the ballots cannot be copied from the machine to the PEB or from the PEB to the tabulating machine.

Horry Vote Audit

The values on the Audit side come from the iVotronic audit data that is read from the flash cards as part of the audit process. That process combines the individual machine data into a master audit file, the EL155 Vote image log.

The EL155 contains a record of all the votes cast on a ballot. The vote images indicate the machine counting the number of times a candidate name for a contest appears in a precinct we get the number of votes cast in that precinct for that candidate. That number should always match the number of votes cast for that candidate in that contest in the iVo column on the EL30A side of the report.

Optical ballots do not have electronically readable audit files. So if the audit data iVotronic total votes does not match the EL30A iVo value one of two things will occur. The first is if the iVotronic tabulated is zero and the Total tabulated votes match the tabulated Optical votes the following comment is made in the Audit side of the report; All votes cast for this candidate in this precinct are optical No Audit Data for optical, or secondly, if the iVotronic total is not zero, a notation indicating which data Audit data In the event a candidate or the combined Write-in candidates did not receive any votes in a precinct the EL30A will report a zero vote count. If there are no votes for this candidate in a precinct in the audit data, the following comment will be placed into the audit report by the auditing software; No Audit Data expected or found.

Finally the audit software will search the audit data for any votes that were not found on the EL30A report. If it finds some, it will report those vote totals by contest, candidate name and precinct. if it does not find any unmatched audit data it will report; There was no unmatched audit data

How to read this report.

This is EL30A EL45A Crosscheck Report. It sums each candidates vote totals in each precinct in the EL30A Precinct Detail Report and compares it to the EL45A Election Summary Report that contains the tabulated total for each candidate in the county.

The values read from the EL30A report are reported in four categories; Total, Optical (Opt), iVotronic (iVo) and Flash. None of these values on each line are calculated but parsed from the actual report. The total lines are the calculated sums of the individual precince line values.

The Opt totals are the total number of votes cast on paper ballots that were scanned into the optical scanner and transferred to the tabulation computer via memory stick or ZipDisk (depending on the type of device, M100 or M650 used to scan the ballots.) Optical totals should exist only in some but not all of the Virtual Precincts at the bottom of the table.

The iVo totals are the results gathered from the PEBs (Personal Electronic Ballot) which are used to open and close an iVotronic voting machine and, after the polls have closed, gather the ballots cast for transmission to the tabulation system.

The Flash totals are the totals that are read from the flash cards in the rare event that the ballots cannot be copied from the machine to the PEB or from the PEB to the tabulating machine.

The values read from the EL45A report are reported in same four categories; Total, Optical (Opt), iVotronic (iVo) and Flash as the EL30A. Like the EL30A they are parsed from the actual EL45A report. The summary candidate totals are compared against the calculated sums for each candidate from, the EL30A report. Each of the values in each line on the EL30A side must match the same value on the EL45A side

and the Delta value must be zero.

The following machines(s) have audit records but no ballots were cast on them: 5132082
Because they do not have ballots cast, they cannot be matched to a precinct.

How to read this report.

This is the PEB Exceptions Report. It checks for the following conditions in the iVotronic Event Log;

- 1: A machine that was opened and closed by different PEBs
- 2: A Machine that was not opened on Election Date - could be either an absentee or test machine
- 3: A Machine that was not closed on Election Date - could have had problem closing
- 4: A Machine that was not opened by 7 am - note most Absentee machines will show up here
- 5: A Machine that was closed before 7pm - polls close at 7 PM
- 6: A Machine that was not closed ever.
- 7: A machine that has no ballots cast on it.

Each of the events above detected are reported on a separate line, each line contains the following information:
iVotronic machine number, Opening PEB Number, Open Time, Closing PEB Number, Closing Time, the Exception Type and the Precinct and the Ballots Cast on that machine.

Absentee and Failsafe precinct machines are opened during the middle of the day several days before the election date of 07/28/2015. So it is normal for these machines to appear on this report with Open Date and Open Time exceptions.

18 preci ncts processed

The follo wing preci nct(s) have no ballots cast in them: Emergency, Failsafe
Note: if there are no ballots cast in a preci nct the machines in that preci nct cannot be identi fied so these preci nct(s) will not appear in this report.

How to read this report.

This is the PEB Used report. It lists the preci nts found in the Audi t data and lists all the PEBs that were used by the poll workers to open and close the iVotronic machines in that. preci nct.

If more than one PEB is used to open and close all the iVotronic machines in a preci nct, then the County Electi on Commissi on must read ALL the PEBs used in that preci nct to assure that they have collected all the ballots from that preci nct. A county whose report shows a preci nct that has machines open or closed by more than one PEB should double check the Ballot Audi t Report against the iVotronic paper tapes and the Poll Book to make sure that all the ballots have been collected and tabulated.

Audit File Descriptions

The audit file package for each election contains six files that are created by the Election Management System, Unity, which is used for elections in South Carolina. These files are used by the audit process created by the South Carolina Election Commission. Each of these text files can be read by any text editor.

The six files are the; EL45A Election Report, EL30A Precinct Report, EL155 Vote Image Log, EL152 Event Log, EL68A System Log and EL68 Manual Entry Log.

EL45A Election Report

The EL45A Election Report is the summary report and shows the grand totals for each contest in the election for the entire county.

Report Header

First line	Indicates the report is a summary, the county, and status of results (unofficial or official)
Second line	Name of election
Third line	Date of election
Fourth line	Date and time the report was created, name of the report and page number
Fifth line	Column titles

The Optical Scan column contains the votes that were cast on paper ballots, the iVotronic column contains the votes that were cast on voting machines, and Flash Data column contains the votes that had to be recovered from the audit data contained on the Flash Cards. This last column will normally be empty as the need to use flash data to count the votes occurs only in very rare situations.

The EL30A Election Report

The EL30A Election Report is the precinct report. It is similar to the EL45A report but it shows the totals in each precinct for each contest that was included in that precinct. These contests can vary from precinct to precinct depending on the location of the district lines in the county. It is possible that a precinct may include two or more seats in a contest but each voter in that precinct can vote for a candidate for only one district.

Report Header

First line	Indicates the report is a summary, the county, and status of results (unofficial or official)

Each precinct is reported separately.

Audit File Descriptions

The last precincts in the election contain the “Virtual Precincts”: Absentee, Emergency, Failsafe, Provisional and Failsafe / Provisional. When for some reason a voter cannot cast his or her ballot on a voting machine in the precinct to which a voter is assigned, that vote is cast in one of these precincts. Examples of reasons a vote must be cast in a virtual include absentee voting and cases when a voter’s right to vote has been challenged in their assigned precinct.

The Emergency, Failsafe, Provisional and Failsafe / Provisional precinct reports are identical to the Absentee Report shown above.

The EL68A System Log

The EL68A System Log is a record of every event that occurred in the Election Management System (Unity) from the time that the election database was loaded prior to the election until the time the report was run.

Report Header

First line	Indicates the report is a summary, the county, and status of results (unofficial or official)
Second line	Name of election
Third line	Date of election
Fourth line	Date and time the report was created, name of the report and page number
Fifth line	Column titles

Audit File Descriptions

The User column is always blank and Counted Information applies only to certain events or operations contained in the log.

The first entry will always be the date and time that the database was created (loaded on to the Unity machine).

```

SYSTEM LOG LISTING                               Richland County
                                                Municipal/Referendum Election
                                                November 05, 2013
RUN DATE:11/12/13 10:17 AM                                ELECTION ID: 40110513
USER DATE    TIME      SYSTEM ACTION OR ERROR INFORMATION          COUNTED INFORMATION
09-26  10:07 am  DATABASE CREATED
  
```

Here is an example where counted information is included in an event.

```

11-05  07:42 pm                                PRC 0750 PACK RECEIVED VTR (BALS=309 TOT=309)
11-05  07:42 pm                                PRC 0850 PACK RECEIVED VTR
  
```

The auditor will refer to this log if an exception to the audit is detected by the automatic audit process or a “deeper dive” into the events of an election is required for any reason. It is not part of the automated audit process.

The EL68 Manual Entry Log

The EL68 Manual Entry Log is a record of every manual entry that occurred in the Election Management System (Unity) from the time that the election database was loaded prior to the election until the time the report was run.

Report Header

First line	Indicates the report is the Manual Changes Log Listing and the county
Second line	Name of election
Third line	Date of election
Fourth line	Date and time the report was created and the election ID
Fifth line	Column titles

Audit File Descriptions

The Election ID contains eight characters and is NORMALLY the county number and the date of the election in the form of mmddyy.

The User column is always blank, the GRP column indicates the Report Group in which the change was made if applicable. Group 3 is the Optical group, group 4 is the voting machine group.

MANUAL CHANGES LOG LISTING		Sample County							
		Sample Election							
		Samplemonth 1, 2013							
RUN DATE:11/12/13 10:17 AM								ELECTION ID: 40110513	
PRECINCT	CANDIDATE	USER	DATE	TIME	GRP	OLD	NEW		
0101 Precinct 1	VOTERS		11-05	04:21 pm		0	1,852		
0102 Precinct 2			11-05	04:21 pm		0	943		
0103 Precinct 3			11-05	04:21 pm		0	1,476		

If the candidate column contains the word "VOTERS" and the Old column contains a zero, this is a manual entry for the number of registered voters in the precinct. This is a normal entry performed on Election Day usually sometime between 9 AM and 7 PM. Note that in the example above the word "VOTERS" appears only in the first entry, the subsequent entries are all blank.

In the following example we can see that the same thing happens in the precinct column.

0750 Absentee	BALLOTS CAST - TOTAL	04-08	10:13 am	3	0	3
	Candidate A	04-06	01:04 pm	4	0	1
		04-08	10:05 am	3	0	1
		04-08	10:11 am	4	1	0
	Candidate B	04-06	01:04 pm	4	10	12
		04-08	10:05 am	3	0	2
		04-08	10:08 am	4	12	22
		04-08	10:11 am	4	22	10

Care must be taken when evaluating a situation where the value was changed more than once. As you can see, manual entries were made for these candidates on 04/06 and 04/08.

On 04/06

- At 1:04 PM Candidate A group 3 (Optical) was set to 1
- And Candidate B group 4 (iVotronic) was changed from 10 to 12

Audit File Descriptions

On 04/08

- At 10:05 AM Candidate A group 3 (Optical) was set to 1
- And Candidate B group 3 (Optical) was set to 2
- At 10:08 AM Candidate B Group 4 (iVotronic) 10 votes were manually added to the 12 that were there after the 04/06 manual entry
- At 10:11 AM Candidate B Group 4 (iVotronic) 12 votes were removed, returning the count to 10.
- At 10:13 AM The Total Ballots Cast in Group 3 (Optical) was set to 3.

A review of the EL68A System log indicates that there were 10 iVotronic ballots cast in the Absentee precinct that were electronically read in at 01:02 PM on 04/06. The audit confirmed that all 10 Absentee iVotronic ballots were cast for Johnson when checking the EL30A iVotronic total versus the EL155 Vote Image File.

The EL30A report for the Absentee precinct in this election is below.

0750 Absentee		TOTAL VOTES	%	Optical Scan	iVotronic
REGISTERED VOTERS - TOTAL	0			
BALLOTS CAST - TOTAL	13		3	10
State House of Rep. Dist 64					
Seat to Fill 1					
Candidate A	1	7.69	1	0
Candidate B	12	92.31	2	10
Write-In.	0		0	0
Total	13		3	10

The above example is why the SEC Audit process automatically creates an exception when it detects that a manual entry was made. The auditor must perform a manual evaluation of the events and confirm that a mistake in the vote count was not made.

Audit File Descriptions

EL155 Vote Image Log

The EL155 Vote Image Log is a record of every ballot cast on the iVotronic voting machines in the county.

Report Header

First line	Date and time the report was created the precinct number and name and the the Election ID
Second line	Column titles

The Election ID contains eight characters and is NORMALLY the county number and the date of the election in the form of mmddyy.

The VOTR. column contains the serial number of the iVotronic voting machine upon which the vote was cast, the B/I column contains the Ballot Index which indicates which ballot style that appears in the precinct was used to cast that ballot (Note: the ballot index can be different in each precinct for a ballot style that is common to the precincts.

There is a number before the candidate name that is used to indicate precinct totals for each candidate in the precinct footer at the bottom of the each precinct. In this case candidate 2 is Steve Benjamin who received 37 votes in this precinct and candidate 7 is Tamekia Isaac Devine who received 33 voted in this precinct.

The office that the candidate is seeking is placed in the final column in this report. There is no header for that column.

Note the asterisk (*) in some of the records in this report. This indicates the first record in each ballot. So the ballot image for the first ballot shown in this report voted for Steve Benjamin, Tamekia Isaac Devine and Yes, in favor of the question put forward in the county resolution.

Although the precinct, voting machine and the votes cast on each ballot can be determined, the order in which the ballots are cast is randomly presented in this report so neither the time of day the ballot was cast nor the voter's identity can be discovered.

Audit File Descriptions

The EL152 Event Log

EL152 Event Log is a record of every event or operation that occurred on every iVotronic voting machine used in the election. Each machine is reported sequentially in ascending serial number order. Each event or operation on a machine is reported in chronological order.

Report Header

First line	Date and time the report was created the precinct number and name and the Election ID
Second line	Column titles

The Election ID contains eight characters and is NORMALLY the county number and the date of the election in the form of mmddyy.

The Votronic column contains the serial number of the iVotronic voting machine on which the event occurred, the PEB# column contains the serial number of the PEB (Personal Electronic Ballot, the device that is used to open a terminal session on the voting machine to perform an operation such as allowing a voter to cast his or her ballot), the Type column contains the type of PEB being used, normally SUP.

Date and time are read from an internal clock on each machine that can be set during the set up during the machine configuration prior to each election. If this operation is not performed or performed incorrectly during set up, the time and date will be incorrect.

SUP 01/21/2014 19:01:51 0001416 Copy audit data from TF 1 to CF
```

Each event has an event code and a description of the event. The log segment shown above shows a typical set of events or operations that occur on a single machine during an election. The first message is always “0000601 Zero terminal config data” and the last is always “0001416 Copy audit data from TF 1 to CF”.

Note: there are a couple of event sequences that are created by improper insertion of the PEB into the voting machine. Usually the PEB is pulled before it has a chance to handshake properly with the voting machine. Depending of the timing of that pulling, a sequence similar to the sequences below can be generated.

```
SUP 01/21/2014 12:37:46 0002400 PEB access failed
SUP 01/21/2014 12:37:46 0000706 Failed to retrieve EQC from PEB
SUP 01/21/2014 12:37:46 0001635 Terminal shutdown - IPS exit

SUP 01/21/2014 16:03:43 0001720 PEB pulled during PEB block verify
SUP 01/21/2014 16:03:43 0002210 PEB block CRC error
SUP 01/21/2014 16:03:43 0001302 Failed to get PEB vote header block
SUP 01/21/2014 16:03:44 0002400 PEB access failed
SUP 01/21/2014 16:03:44 0000706 Failed to retrieve EQC from PEB
```

Audit File Descriptions

SUP 01/21/2014 16:03:45 0001635 Terminal shutdown - IPS exit

When this happens, the poll worker waits a few seconds and tries again, waiting longer after the insertion and the voting process continues normally. Despite the alarming message “Terminal shutdown - IPS exit” this is not a critical error. It is a message that states that the terminal session initiated by the insertion of the PEB has ended.
